

# myEarth: A Collaborative Initiative

---

## Abstract

Introducing 'myEarth', a collaborative site where users can share reliable information and discuss environmental issues with each other. This, we believe, will greatly improve collaboration across various disciplines, encourage innovation, and awareness about environmental issues. We opine that by providing this open-platform to everyone on the internet, we can improve the engagement of the general public in sustainable development, which in-turn will foster harmony among people.

### Objective of the study:

Our team conducted an online survey to find out what our peers think about togetherness and sustainable development, what challenges they face when implementing a sustainable lifestyle, and what changes they'd like to see regarding the same.

### Principle:

#### Systematic and Objective Data Collection:

The survey was designed keeping in mind that the survey should be independent of biases and that the respondent has freedom to give their own answer that isn't already presented as a choice.

#### Ethical Considerations:

The respondents were made aware of the purpose of the survey, how the data will be used, and that they can choose to keep their identity confidential.

### Type of Project:

We have designed a working model as a proposal to solve the problems that people commonly face with regards to sustainability.
